SAFE WORK PROCEDURE

PROCEDURE FOR FILLING DRY CERTAINTY WIPE ROLLS WITH DISINFECTANT:

1. Open a new case of certainty wipes rolls (6 rolls / case)
2. Remove the paper roll insert from the middle of the dry roll.
3. Place the roll into a large Ziplock bag (supplied).
4. Place the bag into the case it came with. Repeat for the remaining rolls in the case.
5. Pour 4L of Oxivir TB from the bulk pail into the measuring pail.
6. Pour 4L pail contents into the middle of each roll in the zip lock bag.
7. Pour Oxivir into all 6 bags first. Then remove all the air and zip the bag closed.
8. Turn each bag upside down and place back into the case. Ensure each bag is completely closed otherwise all the disinfectant will leak out.
9. Close the case and start on the next box.
